2021 WPA Volunteering Child Psychiatry Pilot Project Pakistan

WPA is working towards bridging the knowledge and skills gap between experts and young psychiatrists. Pakistan has been chosen as one of the initial sites for running this program on pilot basis. Child and adolescent psychiatry clinical training has been identified as an area of need. A group of international experts will be collaborating to train young psychiatrists in assessment and management of common child and adolescent mental health conditions. This will be delivered in a series of 8 weekly sessions, time and days will be communicated near the start of the program (Oct 2021-Jan 2022).

Note: This is first of such training projects, if the pilot is successful it is likely to be followed up by further such opportunities in other sub-specializations as well. The findings and feedback from this project will be used towards publishing without your identifying information.

You are requested to fill out this form to submit your willingness to participate.
